Amendment to the Abstract:

The Abstract has been amended. A revised Abstract is attached.

Abstract:

Piston Pump

ABSTRACT OF THE DISCLOSURE

The invention relates to a supply device for the supply of pressure fluid into at least one vehicle brake, into a pressure fluid reservoir or into a pressure fluid accumulator, with a pressure fluid inlet and a pressure fluid outlet as well as with the following features: a piston $\frac{1}{2}$ is movably arranged in an accommodating member [4] and has at least two hydraulically active diameters $\frac{1}{2}$, $\frac{1}{2}$ for the supply in the direction of the pressure fluid outlet, at least one non-return valve $\frac{1}{2}$, $\frac{1}{2}$ is used for the ventilation of a working chamber $\frac{1}{2}$ into which the piston $\frac{1}{2}$ is immersed.

It is the essence of the invention that the piston $\frac{2}{2}$ has a multi-part design and comprises at least two synchronously movable partial pistons $\frac{13}{14}$, $\frac{13}{14}$, $\frac{24}{13}$, with the first partial piston $\frac{13}{14}$ exhibiting the first hydraulically active diameter $\frac{13}{14}$, and the second partial piston $\frac{14}{14}$; $\frac{24}{14}$ exhibiting the second hydraulically active diameter $\frac{13}{14}$.
